Post Fit: 5.1 Emorging / 5.2 Exposted / 5.2 Exceeding

identify, describe and represent the position of a shape following a reflection or translation, using the

appropriate language, and know that the shape has not changed.

Year 5 Key Objectives Number and place value Calculation Pupils should be taught to Pupils should be taught to: Pupils should be taught to: add and subtract whole numbers with more than 4 digits, including using formal written methods read, write, order and compare numbers to at least 1 000 000 and determine the value of each digit recognise and use square numbers and cube numbers, and the notation for squared (2) and cubed (3) (columnar addition and subtraction) count forwards or backwards in steps of powers of 10 for any given number up to 1 000 000 solve problems involving multiplication and division including using their knowledge of factors and add and subtract numbers mentally with increasingly large numbers multiples, squares and cubes interpret negative numbers in context, count forwards and backwards with positive and negative whole numbers, including through zero use rounding to check answers to calculations and determine, in the context of a problem, levels of solve problems involving addition, subtraction, multiplication and division and a combination of these, including understanding the meaning of the equals sign round any number up to 1 000 000 to the nearest 10, 100, 1000, 10 000 and 100 000 solve addition and subtraction multi-step problems in contexts, deciding which operations and methods solve problems involving multiplication and division, including scaling by simple fractions and problems solve number problems and practical problems that involve all of the above involving simple rates. read Roman numerals to 1000 (M) and recognise years written in Roman numerals Pupils should be taught to: identify multiples and factors, including finding all factor pairs of a number, and common factors of two know and use the vocabulary of prime numbers, prime factors and composite (non-prime) numbers **Statistics** Pupils should be taught to establish whether a number up to 100 is prime and recall prime numbers up to 19 round decimals with two decimal places to the nearest whole number and to one decimal place multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including read, write, order and compare numbers with up to three decimal places long multiplication for two-digit numbers Pupils should be taught to: solve problems involving number up to three decimal places multiply and divide numbers mentally drawing upon known facts solve comparison, sum and difference problems using information presented in a line graph divide numbers up to 4 digits by a one-digit number using the formal written method of short division and complete, read and interpret information in tables, including timetables interpret remainders appropriately for the context multiply and divide whole numbers and those involving decimals by 10, 100 and 1000 **Fractions & Percentages** Measures Geometry Pupils should be taught to: Pupils should be taught to: Pupils should be taught to: compare and order fractions whose denominators are all multiples of the same number convert between different units of metric measure (for example, kilometre and metre; centimetre and identify 3-D shapes, including cubes and other cuboids, from 2-D representations metre; centimetre and millimetre; gram and kilogram; litre and millilitre) identify, name and write equivalent fractions of a given fraction, represented visually, including tenths know angles are measured in degrees: estimate and compare acute, obtuse and reflex angles understand and use approximate equivalences between metric units and common imperial units such as draw given angles, and measure them in degrees (o) inches, pounds and pints recognise mixed numbers and improper fractions and convert from one form to the other and write identify: measure and calculate the perimeter of composite rectilinear shapes in centimetres and metres mathematical statements > 1 as a mixed number [for example. $\frac{2}{5} + \frac{4}{5} = \frac{6}{5} = \frac{1}{15}$] angles at a point and one whole turn (total 360o) calculate and compare the area of rectangles (including squares), and including using standard units, square centimetres (cm2) and square metres (m2) and estimate the area of irregular shapes add and subtract fractions with the same denominator and denominators that are multiples of the same angles at a point on a straight line and $\frac{1}{2}$ a turn (total 1800) estimate volume [for example, using 1 cm3 blocks to build cuboids (including cubes)] and capacity [for other multiples of 90o example, using waterl multiply proper fractions and mixed numbers by whole numbers, supported by materials and diagrams use the properties of rectangles to deduce related facts and find missing lengths and angles solve problems involving converting between units of time read and write decimal numbers as fractions [for example, $0.71 = \frac{7.7}{100}$] distinguish between regular and irregular polygons based on reasoning about equal sides and angles. use all four operations to solve problems involving measure [for example, length, mass, volume, money] recognise and use thousandths and relate them to tenths, hundredths and decimal equivalents using decimal notation, including scaling, recognise the per cent symbol (%) and understand that per cent relates to 'number of parts per hundred', Pupils should be taught to: and write percentages as a fraction with denominator 100, and as a decimal

solve problems which require knowing percentage and decimal equivalents of $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{2}{5}$, $\frac{4}{5}$ and

those fractions with a denominator of a multiple of 10 or 25.		7
